Profile

AI/ML engineer and product builder with hands-on experience shipping real-world systems, automation workflows, full-stack AI products. Backed by IIT Delhi IHFC. Open to global research, AI product, and technical PM opportunities.

Education

Shree Guru Gobind Singh Tricentenary University <i>B.Tech, Computer Science & Engineering — AI/ML Specialization</i> GPA: 8.6	2024 – 2028 (Expected) <i>Gurugram, India</i>
St. Thomas School <i>Higher Secondary Education — Non-Medical PCM</i> 86%	2023 – 2024 <i>Bahadurgarh, India</i>
St. Thomas School <i>Senior Secondary</i> 92%	2021 – 2022 <i>Bahadurgarh, India</i>

Experience

Founder's Office Intern <i>CityFurnish (Y-Combinator W19)</i> AI CCTV Deployment: Scoping and implementing AI-powered CCTV surveillance across all warehouse locations for automated ops monitoring and incident detection. Warehouse Reconciliation Automation: Built an n8n pipeline reconciling guard-register data, Odoo ERP, and Delivery Tracker across 5 warehouses daily outputs a variance report, cutting manual checking from hours to zero.	May 2026 – Present <i>Gurugram, India</i>
Research Trainee <i>I-Hub Foundation for Cobotics (IHFC), IIT Delhi</i> - Built ReVive — a CV-based physiotherapy assistant using MediaPipe Pose (33 keypoints), achieving joint angle estimation with $\pm 3^\circ$ tolerance for real-time posture correction. - Engineered WebSocket feedback pipeline with <200ms latency; built therapist dashboard for patient progression tracking. Project pre-incubated at IIT Delhi IHFC.	January 2026 – May 2026 <i>New Delhi, India</i>
Data Analyst Intern <i>International Institute of SDGs & Public Policy Research (IISPPR)</i> Modelled entrepreneurial intention on GEM dataset using XGBoost and Random Forest with SMOTE balancing; applied SHAP for feature interpretability across multi-class prediction tasks. Delivered end-to-end pipeline: data cleaning, encoding, model training.	September 2025 – November 2025 <i>Remote</i>

Projects

Weld Defect Detection System (ADR) - Built YOLOv8 + U-Net pipeline on 24K radiographic weld images across 4 defect classes; achieved mAP@0.5 of 0.87 and F1 score of 0.93 on held-out test set. Reduced inference latency to <1.8s per X-ray. - End-to-end pipeline: preprocessing → detection → segmentation → pixel-to-mm calibration → ASME-compliant PDF report; reduced manual inspection time by ~70%.	2026
Rooftop Detection — Detectify Competition (1st Place) - Built a YOLOv8m rooftop detection model on satellite imagery using custom augmentation pipelines; ranked 1st across all participating teams. - Engineered domain-specific augmentation strategies for aerial and overhead imagery; optimised multi-scale detection under variable lighting and resolution conditions.	2025

Skills & Languages

ML/CV: Python, PyTorch, YOLOv8, U-Net, TensorFlow, scikit-learn, OpenCV, MediaPipe, XGBoost, SHAP
MLOps: MLflow, Docker, DVC, FastAPI, ONNX, n8n, AWS, Git, REST APIs
Web & Full-Stack: React.js, Node.js, Express.js, MongoDB, Flask, Java, Linux
Languages: English (Fluent), Hindi (Native), German (A2)

Honours & Awards

- Pre-Seed Funding — IIT Delhi IHFC** | Secured *Rs.4 Lakh* for ReVive; 1 of only 12 ideas selected nationally through the MCC competitive pitch process.
- 1st Place — Detectify Competition** | Built a YOLOv8m rooftop detection model on satellite imagery using custom augmentation pipelines; ranked 1st across all participating teams.
